Program Concept Recognition...
Lightweight Lexical Source...
A Scalable, Automated Process...
Compiler and tool support for...
A Formal Automated Approach...
A Domain-Specific Language for...
Composition and Refinement of...
Tutorial on JML, the java...
Integrating static analysis...
Interpolation for data...
A New Method of Image...
Foundations of incremental...
Deviation Analysis Through...
Effective static deadlock...
Alchemy: transmuting base...
Design and Specification of...
Effective typestate...
Accurate Centralization for...
The Property Vector...
Using Specialized Procedures...
Synthesis of Partial Behavior...
Coordinating Rule-Based...
A tool for automatic UML model...
Customization and Composition of...
An Environment for Specifying...
Discovering Documentation for...
Developing and debugging...
Reggae: Automated Test...
Automated systematic testing...
A Scalable Formal Method for...
An Extensible System for...
The Desert environment.
Automated Construction of...
Software Measure...
Automatic Method Completion.
Avoiding coincidental...
Evaluating Models for...
Taming coincidental...
Testing context-aware...
Specification of...
Experiences Using Lightweight...
Metamodel-based model...
Automating Software...
Metrics for model driven...
Composable semantics for...
A Cognitive-Based Mechanism...
An empirical study of...
An Analysis-Revision Cycle to...
How to Identify Binary...
